

# VLADISLAV CHAPLYHIN

## Senior 2D Spine Animator

Kyiv, Ukraine

vladyslavchaplyhin@gmail.com · +38 093 078 10 88

<https://www.linkedin.com/in/vladyslavchaplygin/>

<https://t.me/vladleopold> · Portfolio: <https://save2spine.vercel.app/>

28 years / October 1, 1997 · EXP 8 years · SPINE 6 years

## PROFILE

---

Senior 2D Spine Animator with eight years of professional experience in animation and game development, and more than six years working directly in Spine. I build character rigs, animate effects and UI, and set up the shader and code work that lets animation react to the game instead of running on a fixed loop. I have worked both hands-on and as the lead of a 2D animation team, and I work in Ukrainian, Russian and English.

## KEY HIGHLIGHTS

---

- Eight years of professional animation work across Playrix, Evoplay, Lucky Labs and Clonfish, from HTML5 and Flash through to Spine.
- Live support for Gardenscapes, one of the top-grossing mobile games, including shader animation driven by game state.
- Built and ran a 2D animation team for clients, covering estimation and client communication.
- Wrote arbitration and advertising integration with SDK and API automation in C# and Java.
- Created VFX, character animation and interface animation, and integrated animation directly into engine code.

## EXPERIENCE

---

### First 2D Animation Artist

#### 4friends

Nov 2021 — Jun 2022 7 months · VSO, Unity, Spine

I joined 4friends as the first animation artist on the Gardenscapes team. The project was already live and in the top charts, so the work was less about building something new and more about keeping a huge, uneven catalogue of animations consistent while new content shipped every week. I also worked on new Playrix titles, where I set up VSO and Unity animation alongside Spine.

- Provided support for the live Gardenscapes project, one of the top-grossing mobile games.
- Created animation for special effects, game objects, backgrounds and UI elements.
- Worked on new Playrix projects, building animation to the same standards as the live titles.
- Used VSO and Unity Animation alongside Spine so effects matched the engine output.

#### Responsibilities:

Gardenscapes live support; VFX, game objects, backgrounds and UI; New Playrix projects; VSO and Unity integration.

### 2D Animation Artist

#### Voki Games

Dec 2019 — May 2020 5 months · After Effects, Spine

At Voki Games I moved fully onto shader-driven animation and onto connecting animation straight to game logic rather than to fixed timelines. The Playrix work here was the most technically interesting of my career so far: animation that had to react to the game state, in a live service that shipped new content every few weeks.

- Created shader animations that reacted to gameplay instead of playing on a fixed loop.
- Connected animation directly to the game, so state changes drove the visuals.
- Developed animation for Playrix games, including the top series about Austin's mansion and the Gardenscapes universe.

#### Responsibilities:

Shader animation; Gameplay-driven animation; Playrix animation: Austin's mansion, Gardenscapes.

### 2D Animator

#### VOLMI

Jan 2019 — Sep 2019 8 months · After Effects, Spine

This role was half animation and half running a team. I built and managed a 2D animation group for clients who wanted a lot of work done on short notice, which meant estimating subprojects properly, keeping artists informed and keeping clients updated by phone. I also produced animation for Stacklogic, LuckyFish, NetGaming and Huuuge Games.

- Maintained regular communication with clients by phone.
- Created and managed a 2D animation team for demanding clients.
- Estimated team subprojects and improved communication with artists.
- Worked with Stacklogic, LuckyFish, NetGaming and Huuuge Games.

#### Responsibilities:

2D animation team management; Client communication and estimation; Animation for Stacklogic, LuckyFish, NetGaming, Huuuge Games.

## Technical Artist

### Evoplay

Sep 2024 — Aug 2025 11 months · Unity, Spine

Back at Evoplay the balance shifted from animation into engineering. I built application UI and UI mechanics, made animation and VFX in Unity, shipped small 2D mini-games, and wrote the arbitration and advertising integration layer — SDK and API automation in C# and Java. It was the most code-heavy role I have had, and it is where I learned to own a feature from the mechanic to the build.

- Built application UI and developed various UI mechanics.
- Created animation and VFX in Unity.
- Developed 2D mini-games in Unity.
- Developed arbitration and advertising integration systems, including SDK and API control automation in C# and Java.

#### Responsibilities:

Application UI and UI mechanics; Animation and VFX in Unity; 2D mini-games; Arbitration and advertising SDK/API automation (C#, Java).

## 2D Animator, Technical Artist

### Lucky Labs

Sep 2014 — Feb 2017 2 years 5 months · After Effects, Flash, Animate

The studio where I learned the trade, and the longest stretch of my career. It was a full-service team, so I saw post-production through to delivery, and I worked inside a small unit made up of artists, developers and me — which meant learning to hand work over cleanly and to defend an animation decision when it mattered. The video materials for exhibitions and conferences came out of this period as well.

- Created animation VFX, game objects, backgrounds and interfaces.
- Integrated animations directly into code and prepared animation for production.
- Created software animations using particle systems.
- Created video materials for world exhibitions and conferences.

#### Responsibilities:

VFX, game objects, backgrounds and interface animation; Animation integrated into code; Particle-based programmatic animation; Video materials for exhibitions and conferences.

## HTML5 2D Animator

### Clonefish

Dec 2012 — Mar 2014 1 year 3 months · Flash, After Effects, HTML5, Sprite, Edge Animate

Where I started. HTML5 and Flash animation for web: landing pages, banners, casual social games, particle effects and character animation. It is where I learned to build an effect from nothing, to keep the file size sane and to make an animation readable in the first second it appears on screen.

- Animated non-game elements, landing pages, banners and interfaces.
- Created animation effects using particle systems.
- Animated characters, special effects, backgrounds and game elements in HTML5.
- Created animations for casual social games.

#### Responsibilities:

Landing pages, banners and web interfaces; Particle-based animation effects; Character and VFX animation in HTML5; Casual social games.

## SKILLS

---

**Animation:** Spine 2D, Character rigging, Animation of VFX and UI, Shader animation, VSO animation.

**Production tools:** After Effects & Particular, Adobe Animate (Flash), Photoshop, Illustrator, Pixi.js.

**Engines:** Unity Animation, Unreal Engine, Cocos 2DX.

**3D & graphics:** Blender, 3ds Max, Maya.

SPINE, After Effects, Adobe Flash, Adobe Animate, Photoshop, Illustrator, Blender, 3DSMax, Maya, UNITY, unreal engine, Cocos 2DX, VSO, shaders

## EDUCATION

---

### Computer Academy "STEP"

Faculty of Graphic Design

### National Aviation University

Automation of Computer Systems

## ABOUT ME

---

I am a 2D animator who moved into technical work early, because in game production the animation that looks best is rarely the animation that is cheapest to maintain. I care about rigs that a colleague can pick up, effects that read on a phone screen, and systems that let a small team ship a large amount of content.

Outside of production I keep working with Spine and shaders, because that is where my curiosity sits. I am comfortable writing the code a feature needs when nobody else on the team wants to, and I am at my best on the projects where animation and tooling have to be solved together.

I am looking for a senior role in a studio where 2D animation is a core discipline rather than a task passed around, and where the person doing the animation has a real say in how the game feels.
